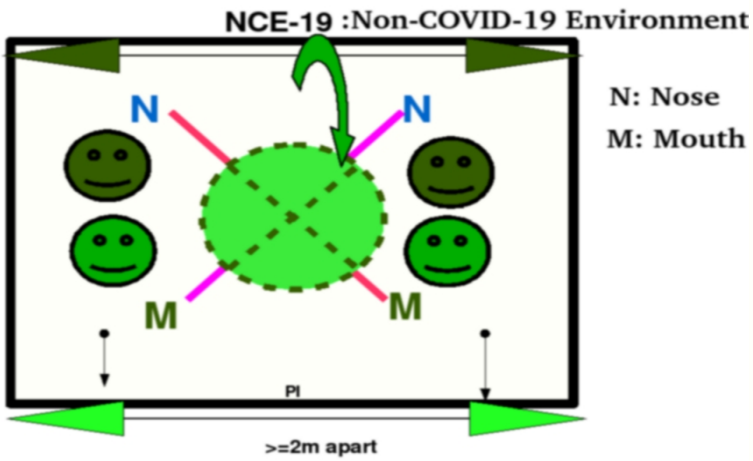
Abstract. *This research notes the impetus of Appdown-19 in the uprise of Covid-19 pandemic. Appdown-19 is about internet-based applications that will create a digital presence in an isolated-free era. Covid-19 partial lockdown is now a total Appdown. A plannable society can put a number of measures in catering for the healthy signal and information of the normal non-Covid society.*

Keywords. appdown; physical-free; contact; mirror-meet; internet; continuum.

1- Introduction

A physical[2]-free contact is possible to be physically present to a contact person without possibly touching each other. The understanding of transport of the current pandemic illness or disease is physical contact not distant at about 2metres apart. The physical point of transmission with a COVID[3] patient is possible when a face mask[5] is not placed or weared on. The daily activity of a healthy non-Covid is anticipated to be placed in a

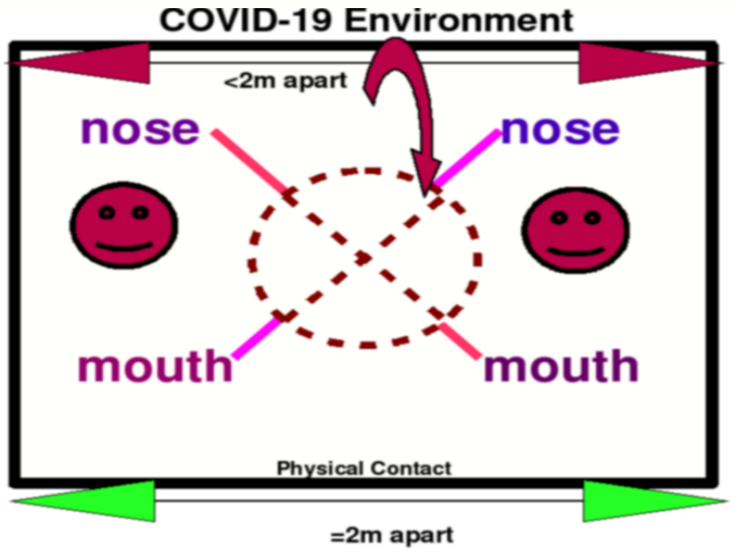
non-quarantine centre and monitored at self-pace. The lockdown is a



problem in a quarantine period when we are all aware of the point of transmission in a COVID environment[6].

The transmission of COVID-19 is a cross transport in a non-clean environment of a COVID present virus[4]. A physical contact is a presence between 3 or more people. A healthy physical point can be achieved when two or more people are face masked with a non-transmissible, a more nose-mouth mask. A COVID transmit point is possible without a nose-mouth mask.

A COVID transmit point is possible when a nose-mouth mask is desirable in a COVID-prone environ-ment. In other sense,



a physical person has no face mask on and having a physical contact with others. The idea of physical contact is scientifically known in the context of physical contact in energy generation[7] or physical attraction. In the sense of energy generation, that is the generation of electrical energy. In harvesting the source of energy is the storage of electrical energy in battery. An unattended and constant source of electrical energy in storage in battery is necessary in providing a block mirror[1] meet.

A block mirror-meet interface is a human computer interface provided by a computing machine. A physical

contact-free is approachable when HCI support is given in a quarantine centre in monitoring a centre in healing process. Computer-supported workspace is another approach to be separated by a mirror-meet presence. The mirror-meet is a novel term in describing a computer monitor or screen blocked from a COVID quarantine centre.

In total survelliance of non-COVID patients is also important as the quarantine fellas. A situation of non-monitored and healthy people is a case of survelliance in the pandemic era. A plannable society[8] can put a number of measures in catering for the healthy signal and information of the normal non-COVID society.

The mirror-meet checkpoint of mounted workplaces are also possible with the current cloud[12] technology[13] provision. Work needs to go on whether COVID-present virus or not. There are many checkpoints in place in and aound the country, Ghana. People are not aable to get to their destinations. Messaging platforms are now important than ever in providing a physical-free mirror-meet interface. If COVID-present virus cannot enable a physical contact but a physical point is enabled with Facebook[9] platform, Skype[11], Gmal Messenger[10] and more. These

technologies hinder a cross-transport from nose-mouth pair. A healthy physical contact points are eliminated from the physical environment to the physical continuum[14] of beings with human presence of internet provision no matter the limit of space and time. There is a precautionary measure already in place by computer professionals and experts to intersect with the physical contact hinderance or prohibition.

An isolated and self-quarantine community is freed from the physical environment COVID-19 present virus.

2- Summary

A total Appdown is an approach in providing a physical-free mirror-met.

Mirror, Mirror, Mirror
Mirror-block, Mirror-Met
Partial Lockdown, Total Appdown
Covid-19, Appid-19
Isolated Commune, Physical Community
Physical Lockdown, Digital Presence
Cross Transport, Internet Protocol Transport.
